

# Lab 01: Getting Started with Translations Builder

**Overview:** In this lab, you will learn how to work with Power BI Desktop and Translations Builder to build multi-language reports for Power BI. You will start by downloading a PBIX project file named **TB-Lab01.pbix** and opening it in Power BI Desktop. Once you have opened **TB-Lab01.pbix**, you will launch Translations Builder and move through the steps to add metadata translations and report label translations. At various milestones in this lab, you will be required to publish the **TB-Lab01.pbix** project from Power BI Desktop to the Power BI Service so you can test how the translations you've added to the PBIX project to ensure they are displayed to users when loaded using different languages and different cultures.

**Prerequisite 1:** To complete this lab, you will need a Power BI workspace where you have appropriate permissions to publish PBIX project files from Power BI Desktop to test your work. This workspace must also be associated with a Premium capacity as indicated by the diamond image (see below) displayed after the workspace name. A workspace in a premium capacity is required because Power BI translations do not load properly for reports in the shared capacity.

**Prerequisite 2:** This lab assumes you've already installed Translations Builder. If you haven't installed Translations Builder yet, you must follow steps in the [Translations Builder Installation Guide](#) before continuing with these lab exercises.

## Exercise 1: Creating and Testing Metadata Translations

In this exercise, you will begin by downloading a PBIX file with a simple data model and a single page report. You will publish the project to the Power BI Service to set up a workflow process to test how translations appear to report consumers. At the end of this exercise, you will use Translations Builder to add metadata translations for the column names and measure names in the dataset.

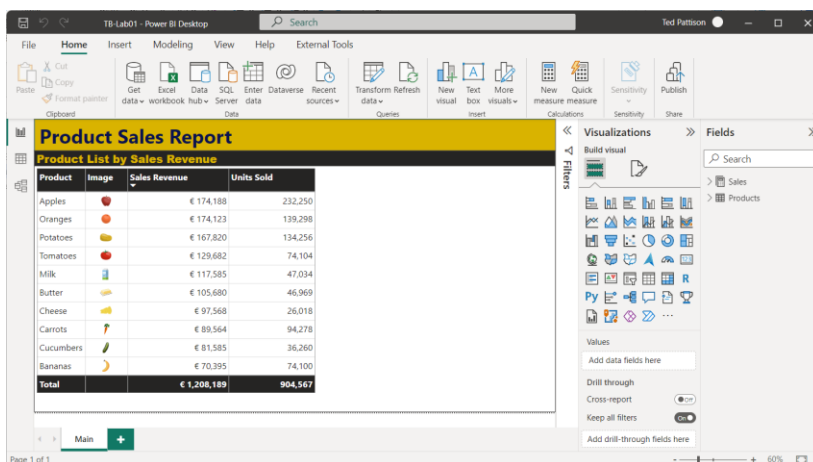

1. Download the PBIX starter file named **TB-Lab01.pbix** from the following link

<https://github.com/PowerBiDevCamp/TranslationsBuilder/raw/main/Labs/StarterFiles/TB-Lab01.pbix>

2. Create a new folder on your local hard drive for these lab exercises in a location such as **C:\DevCampLabs\**.

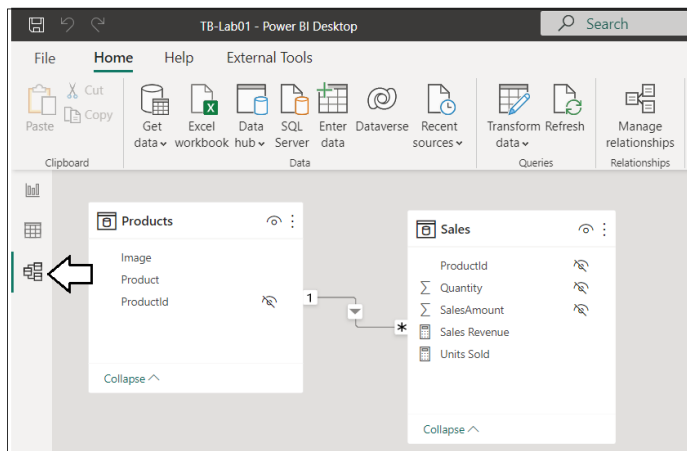

3. Copy **TB-Lab01.pbix** into the lab folder and then open it in Power BI Desktop to examine the report inside.

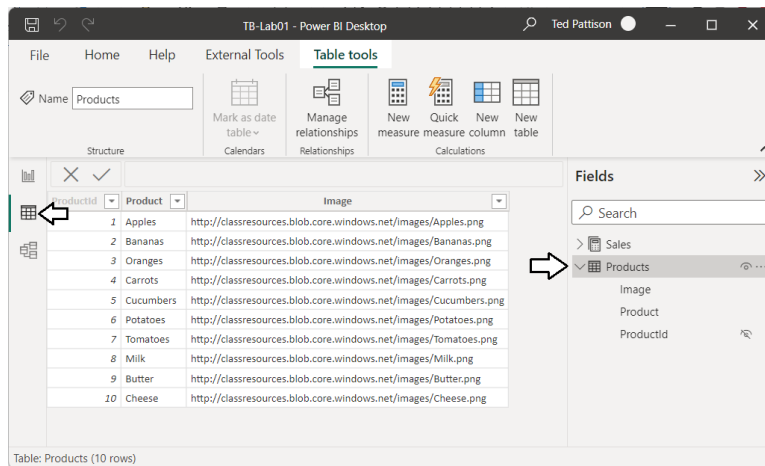

4. While in **Report view**, examine the **Fields** list to see the non-hidtables, columns and measure that are not hidden.

5. Now, navigate to **Model view** so you can see the entire data model including the columns hidden from **Report view**.

6. Navigate to **Data view** and examine the rows of the **Products** table.

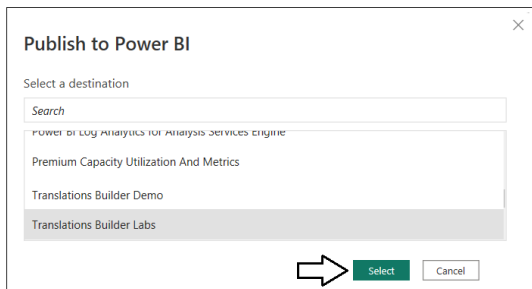

Now you are going to publish the **TB-Lab01.pbix** project to a workspace in the Power BI Service.

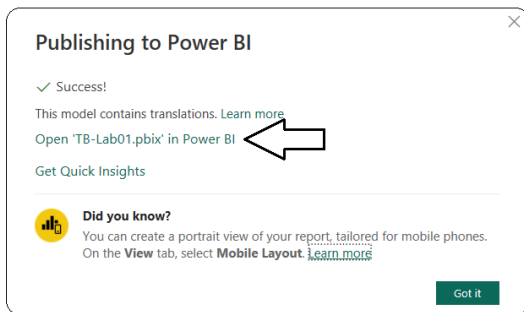

7. Navigate to the **Home** tab and then click the **Publish** button.

8. When prompted by the **Publish to Power BI** dialog, choose your test workspace and then click **Select**.

9. Once you see **Success!**, click **Open 'TB-Lab01.pbix' in Power BI** to view the report in the Power BI Service.

10. The report named **TB-Lab01** should appear like the report shown in the screenshot below.

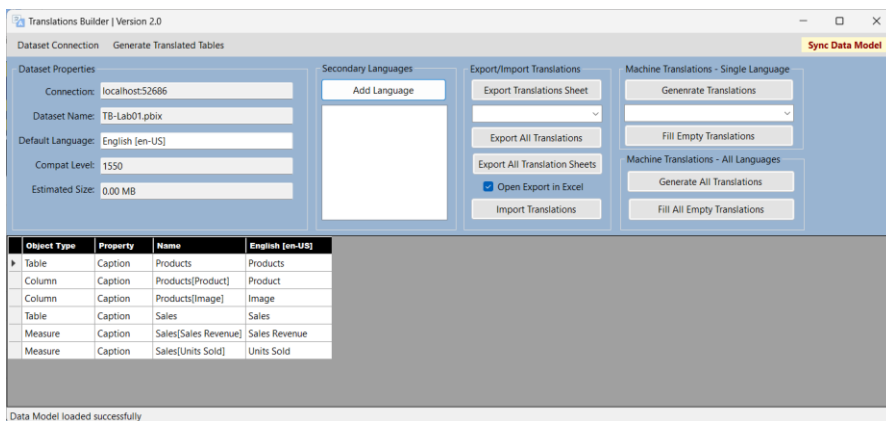

Product	Image	Sales	Units Sold
Apples		€ 174,188	232,250
Oranges		€ 174,123	139,298
Potatoes		€ 167,820	134,256
Tomatoes		€ 129,682	74,104
Milk		€ 117,585	47,034
Butter		€ 105,680	46,969
Cheese		€ 97,568	26,018
Carrots		€ 89,564	94,278
Cucumbers		€ 81,585	36,260

Now it's time to begin adding translations. As you begin to add translations to a PBIX project, you will often follow this set of steps: **(1)** make changes in Power BI Desktop, **(2)** publish the project, **(3)** check your work in the Power BI Service, **(4)** repeat until happy

11. Return to Power BI Desktop, navigate to the **External Tools** tab and launch **Translations Builder**.

12. Translations Builder should start and load the data model for **TB-Lab01.pbix** as shown in the following screenshot.

13. The **Dataset properties** section provides details about the dataset connection and the PBIX project file.

14. The translation grid at the bottom of the page displays one row for each non-hidden dataset object in the data model.

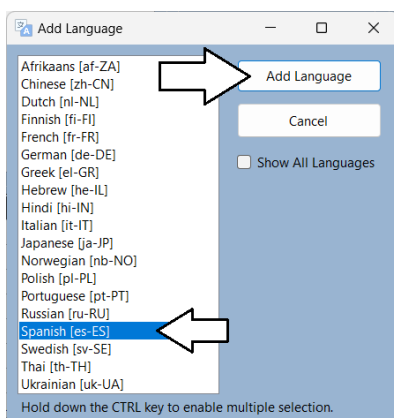

Object Type	Property	Name	English [en-US]
Table	Caption	Products	Products
Column	Caption	Products[Product]	Product
Column	Caption	Products[Image]	Image
Table	Caption	Sales	Sales
Measure	Caption	Sales[Sales Revenue]	Sales Revenue
Measure	Caption	Sales[Units Sold]	Units Sold

Tables, columns and measures that are hidden from report view in the data model are not displayed. You don't need to translate them.

15. Click the **Add Language** button to add your first secondary language.

16. Select **Spanish [es-ES]** and click **Add Language**.

17. You should now see that **Spanish [es-ES]** appears as the first language in the **Secondary Languages** list.

18. You will also notice that a new column has been added for Spanish translations.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]
Table	Caption	Products	Products	
Column	Caption	Products[Product]	Product	
Column	Caption	Products[Image]	Image	
Table	Caption	Sales	Sales	
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	
Measure	Caption	Sales[Units Sold]	Units Sold	

19. In the row with the **Products** table, click on the cell for the **Spanish** column. It should turn blue when selected.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]
Table	Caption	Products	Products	
Column	Caption	Products[Product]	Product	
Column	Caption	Products[Image]	Image	

20. Type **Hello World**. You should see that you can just start typing in the selected cell to add or edit a translation.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]
Table	Caption	Products	Products	Hello World
Column	Caption	Products[Product]	Product	
Column	Caption	Products[Image]	Image	

21. Press the **ENTER** key to save your changes. Note that pressing **ENTER** will move the selection to the cell below.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]
Table	Caption	Products	Products	Hello World
Column	Caption	Products[Product]	Product	
Column	Caption	Products[Image]	Image	

22. Now, type more text and press **ENTER** repeatedly to experiment quickly adding text to all cells in the Spanish column.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]
Table	Caption	Products	Products	Hello World
Column	Caption	Products[Product]	Product	Hey
Column	Caption	Products[Image]	Image	This
Table	Caption	Sales	Sales	Is
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Realy
Measure	Caption	Sales[Units Sold]	Units Sold	Easy

The point of the last few steps has been for you to become comfortable with the translation editing experience. You can see the grid provides an editing experience similar to working with Excel. You can even use the **{F2}** key to move a cell with content into edit mode.

23. Now edit the translations in the Spanish column with better translated values. Use the following translations.

- For the **Products** table, enter the Spanish translation of **Productos**.
- For the **Product** column, enter the Spanish translation of **Producto**
- For the **Image** column, enter the Spanish translation of **Imagen**.
- For the **Sales** table, enter the Spanish translation of **Ventas**.
- For the **Sales Revenue** measure, enter the Spanish translation of **Ingresos Por Ventas**.
- For the **Units Sold** measure, enter the Spanish translation of **Unidades Vendidas**.

24. When you are done with your edits, the Spanish translations should match the following screenshot.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]
Table	Caption	Products	Products	Productos
Column	Caption	Products[Product]	Product	Producto
Column	Caption	Products[Image]	Image	Imagen
Table	Caption	Sales	Sales	Ventas
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas
Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas

25. Return to the **TB-Lab01.pbix** project in Power BI Desktop and save your work by clicking the **Save** button.

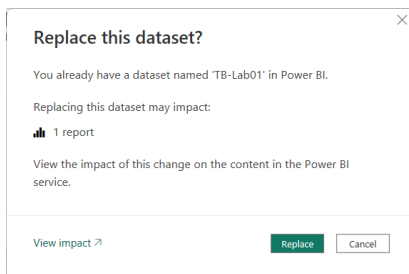

It's easy to forget to save your changes in Power BI Desktop. Be aware that any changes made by Translations Builder are just made to the data model loaded in memory. None of your changes are saved back to the PBIX project file until you save in Power BI Desktop.

26. Publish the **TB-Lab01.pbix** project to push the changes to the project's translations to the Power BI Service.

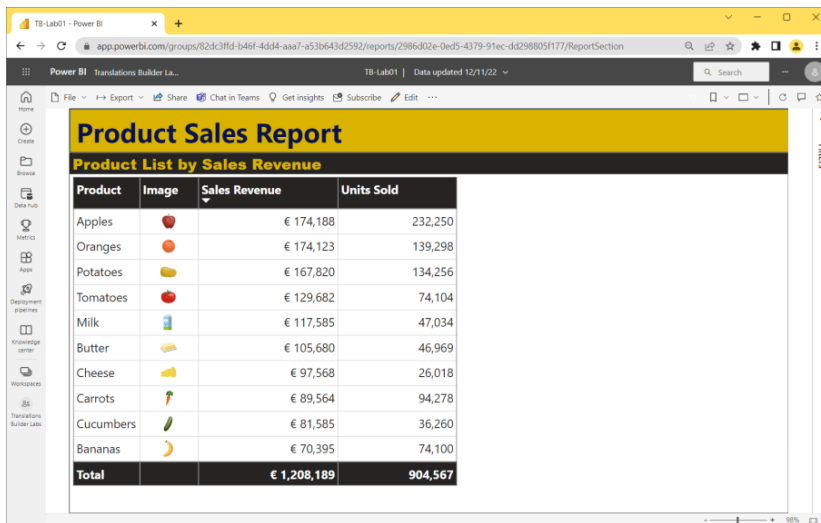

27. When prompted by the **Replace this dataset?** Dialog, click the **Replace** button to continue.

28. Once you see **Success!**, click **Open 'TB-Lab01.pbix' in Power BI** to view the report in the Power BI Service.

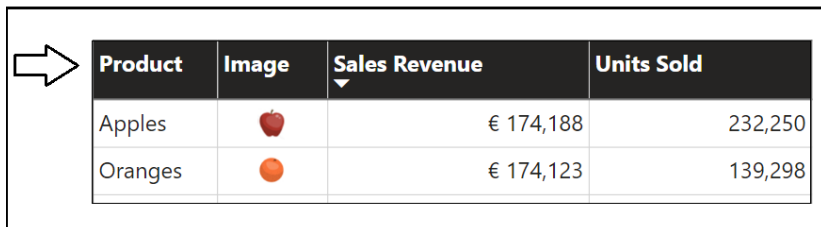

29. The report should load with its default behavior showing all text in English at first.

Product	Image	Sales Revenue	Units Sold
Apples		€ 174,188	232,250
Oranges		€ 174,123	139,298
Potatoes		€ 167,820	134,256
Tomatoes		€ 129,682	74,104
Milk		€ 117,585	47,034
Butter		€ 105,680	46,969
Cheese		€ 97,568	26,018
Carrots		€ 89,564	94,278
Cucumbers		€ 81,585	36,260
Bananas		€ 70,395	74,100
<b>Total</b>		<b>€ 1,208,189</b>	<b>904,567</b>

30. Inspect the table visual column headers which displays the names of columns and measures in English.

Product	Image	Sales Revenue	Units Sold
Apples		€ 174,188	232,250
Oranges		€ 174,123	139,298

Now, it's time to test your translations. You will accomplish this by using the **language** query string parameter to load the report.

Click the browser address bar and add the following **language** parameter to the end of the report URL.

`?language=es-ES`

31. Press **ENTER**. You should see the **language** query string parameter accepted by the browser as it reloads the report.

When the report reloads, you should see the UI experience for the Power BI Service UI switch from English to Spanish.

32. Verify the column and measure names in columns headings are displayed with the Spanish translations you added.

Producto	Imagen	Ingresos Por Ventas	Unidades Vendidas
Apples		€ 174,188	232,250
Oranges		€ 174,123	139,298

You have now successfully added the metadata translations to display this report in both English and Spanish. Leave Power BI Desktop and Translations Builder open as you will continue using them in your next exercise.

## Exercise 2: Generating Machine Translations

In this lab you will configure Translations Builder's support to automatically generate machine translations using the Azure Translator Service. While machine translations might not prove good enough to use in all production scenarios, they do provide a great first step in generating translations for testing and getting something into production sooner.

To complete this lab you will require a **Key** and **Location** which provide access to the **Azure Translator Service**. If you do not have a Azure subscription and you cannot obtain your own Key, you can use the following Key and Location up through February 28, 2023.

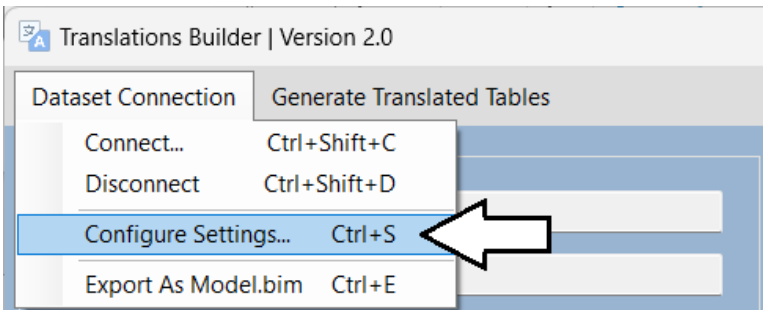

Key: **a75b371ce1fc402ca84a05732cfcff27**

Location: **eastus2**

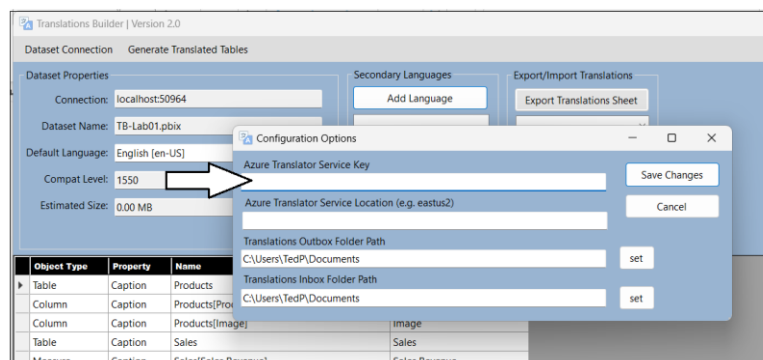

1. Return to Translations Builder and drop down the **Dataset Connection** menu.

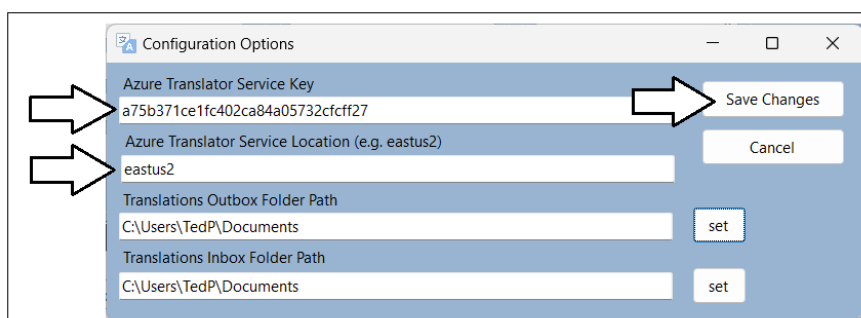

2. Select the **Configure Settings...** menu command to display the **Configuration Options** dialog.

3. In the **Configuration Options** dialog, enter the **Key** and **Location** for the Azure Translator Service.

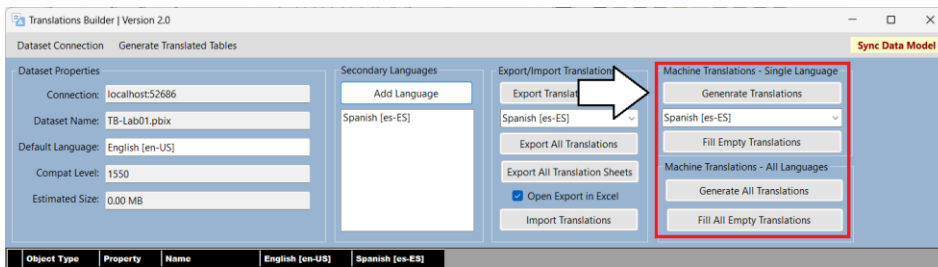

4. Once you have added the **Key** and **Location**, click **Save Changes**.

5. After you have configured the **Key** and **Location** for the Azure Translator Service, new controls will appear on the main page.

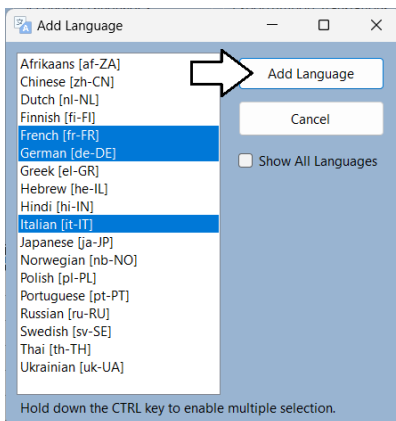

Now that you have added support for generating machine translations, it's time to put that automatic translation support to work!

6. Click the **Add Language** button to add your second secondary language.

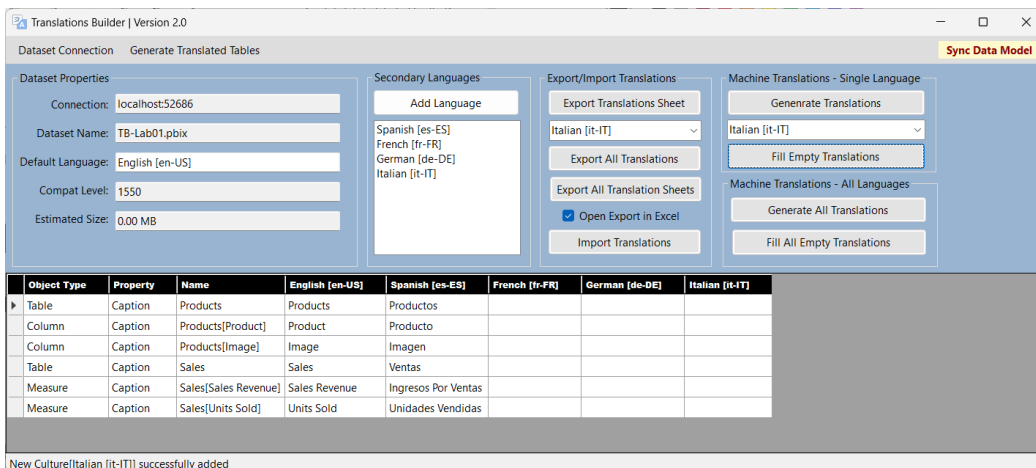

You can hold down the **CTRL** key in the **Add Language** dialog while selecting languages to enable multiple selection

7. Hold down the **CTRL**, and select **French**, **German** and **Italian**. And then click **Add Language**.

8. You should now see the three new languages appear in the **Secondary Languages** list.
9. You will also notice that new columns have been added to the translation grid for each new language.

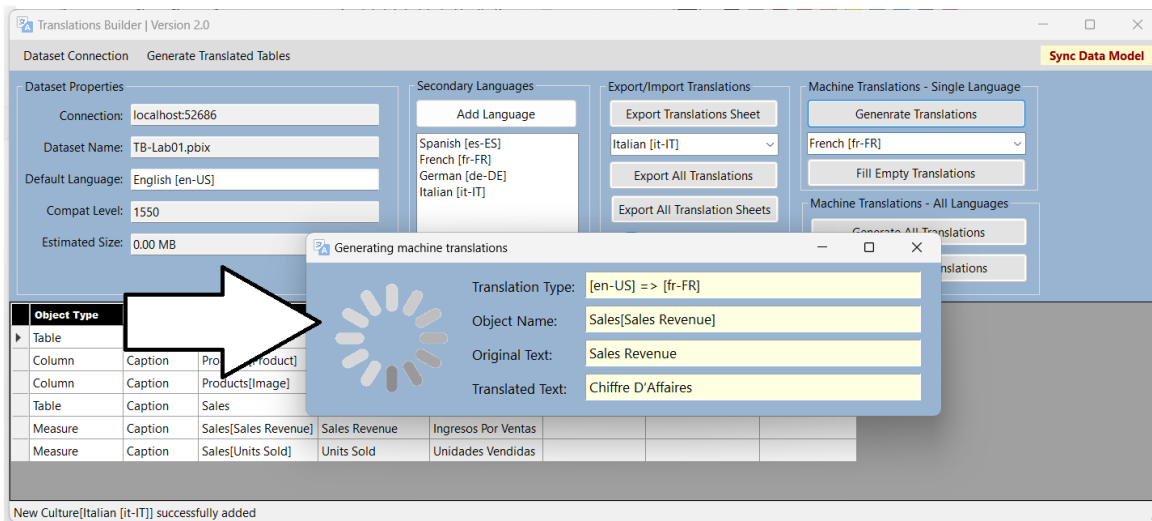

10. In the **Machine Translations – Single Language** section, select **French [fr-FR]** from the drop down menu.

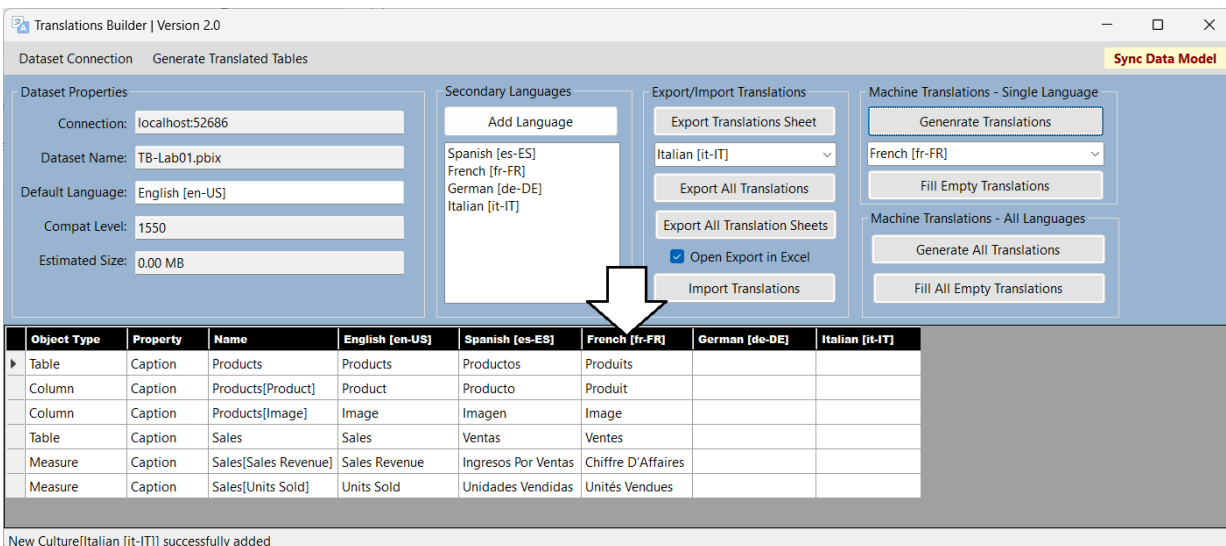

11. Once you have selected **French [fr-FR]**, click **Generate Translations** to create French translations for all rows in the grid.

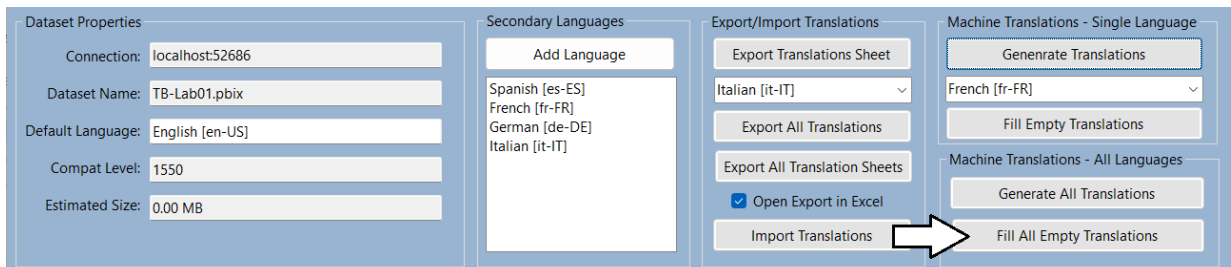

12. As the code runs to interact with the Azure Translator Service, the **Generating machine translation** dialog shows the progress.

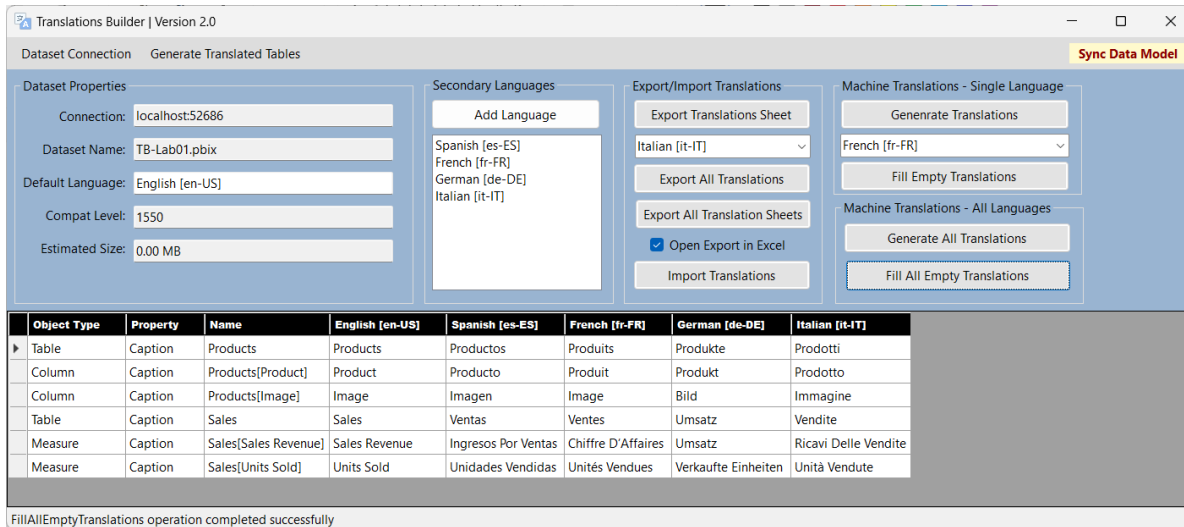

13. Once this dialog closes, you should see all cells the French column has been filled with machine-generated translations.

14. Click the **Fill All Empty Translation** button in the **Machine Translations - All Languages** section.

15. You should see that the empty cells for all languages have now been populated with machine-generated translations.

Now, it's time once again to test your work in the Power BI Service,

16. Return to the **TB-Lab01.pbix** project in Power BI Desktop and save your work by clicking the **Save** button.

Don't forget to save your work! Did we mention it's easy to forget to save in Power BI Desktop and to lose your work.

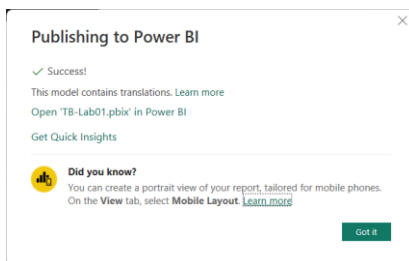

17. Publish the **TB-Lab01.pbix** project to push your changes to the project's translations to the Power BI Service.

18. When prompted by the **Replace this dataset?** Dialog, click the **Replace** button to continue.

19. Once you see **Success!**, click **Open 'TB-Lab01.pbix' in Power BI** to view the report in the Power BI Service.

20. The report should load as normal showing all text in English at first.

The screenshot shows the Power BI report "Product Sales Report" with the subtitle "Product List by Sales Revenue". The table displays the following data:

Product	Image	Sales Revenue	Units Sold
Apples		€ 174,188	232,250
Oranges		€ 174,123	139,298
Potatoes		€ 167,820	134,256
Tomatoes		€ 129,682	74,104
Milk		€ 117,585	47,034
Butter		€ 105,680	46,969
Cheese		€ 97,568	26,018
Carrots		€ 89,564	94,278
Cucumbers		€ 81,585	36,260
Bananas		€ 70,395	74,100
<b>Total</b>		<b>€ 1,208,189</b>	<b>904,567</b>

Now, it's time to test your French, German & Italian translations using the **language** query string parameter to load the report.

21. Click the browser address bar and add the **language** parameter value of **fr-FR** for French to the end of the report URL.

**?language=fr-FR**

22. When the report reloads, you should see the UI experience for the Power BI Service UI switch from English to French.

23. Verify the column and measure names in columns headings of the table visual are displayed with French translations.

The screenshot shows the Power BI report in French. The table header is highlighted with a red box. The headers are: "Produit", "Image", "Chiffre D'Affaires", and "Unités Vendues". The data rows show "Apples" and "Oranges" with their respective sales revenue and units sold.

Produit	Image	Chiffre D'Affaires	Unités Vendues
Apples		€ 174 188	232 250
Oranges		€ 174 123	139 298

Now that you have tested the French translations, it's time to test the two other new languages.

24. Click the browser address bar and add the **language** parameter value of **de-DE** for German to the end of the report URL.

```
/?language=de-DE
```

25. When the report reloads, you should see the UI experience for the Power BI Service UI switch to German.

26. Verify the column and measure names in columns headings are displayed with the German translations.

Produkt	Bild	Umsatz	Verkaufte Einheiten
Apples		€ 174.188	232.250
Oranges		€ 174.123	139.298

27. Click the browser address bar and add the **language** parameter of **it-IT** for Italian to the end of the report URL.

```
/?language=it-IT
```

28. When the report reloads, you should see the UI experience for the Power BI Service UI switch to Italian.

29. Verify the column and measure names in columns headings are displayed with the Italian translations.

Prodotto	Immagine	Ricavi Delle Vendite	Unità Vendute
Apples		€ 174.188	232.250
Oranges		€ 174.123	139.298

You have now successfully added the metadata translations to display this report in five different languages. Throughout these lab exercises, you will continue to test all five languages in the browser as you add additional translation support.

30. As a final step in this exercise, add a browser bookmark for each language with a **language** parameter at the end.

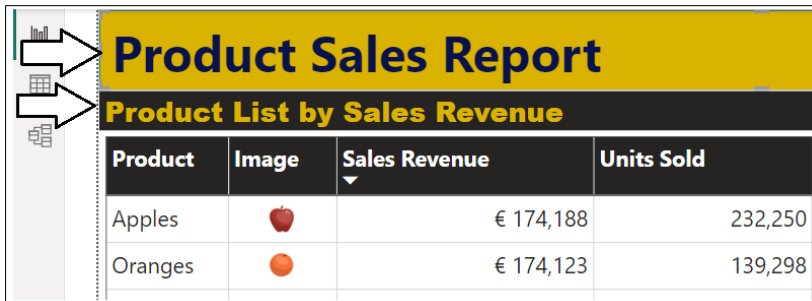

Creating a browser bookmark for each language might take a minute or two to set up at first. However, it will save lots of time in the long run as you continue to test the translations for this report in the lab work that remains ahead.

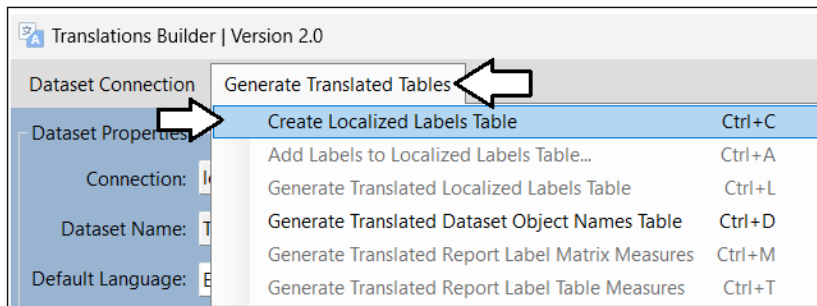

### Exercise 3: Creating and Testing Report Label Translations

In this exercise, you will work through the process of adding report label translations. You will add translations for the report title which is **Product Sales Report** and for the title of the table visual which is **Product List by Sales Revenue**. This will give you experience working with the localized labels table strategy that Translations Builder uses to quickly and easily implement report label translations.

1. Return to the **TB-Lab01.pbix** project in Power BI Desktop and move to **Report view**.
2. The text **Product Sales Report** is displayed with a rectangle shape object.
3. The text **Product Sales List by Sales Revenue** is displayed using the **Title** property of the table visual.

4. Now, move back to Translations Builder and drop down the **Generate Translated Tables** menu.
5. Select the **Create Localized Labels Table** to create the **Localized Labels Table**.

6. When you create the **Localized Labels** table, you will be prompted with the following dialog. Click **No** to continue.

If you click **Yes**, Translations Builder will launch a browser and navigate to [this web page](#) which explains the localized labels strategy.

7. Once Translations Builder has created the **Localized Labels** table, it will also add three sample report labels.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]	Dutch [nl-NL]	French [fr-FR]	German [de-DE]	Italian [it-IT]
Table	Caption	Products	Products	Productos	Producten	Produits	Produkte	Prodotti
Column	Caption	Products[Product]	Product	Producto	Product	Produit	Produkt	Prodotto
Column	Caption	Products[Image]	Image	Imagen	Beeld	Image	Bild	Immagine
Table	Caption	Sales	Sales	Ventas	Verkoop	Ventes	Umsatz	Vendite
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas	Omzet	Chiffre D'Affaires	Umsatz	Ricavi Delle Vendite
Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas	Verkochte Eenheden	Unités Vendues	Verkaufte Einheiten	Unità Vendute
Measure	Caption	Localized Labels[My Report Title]	My Report Title					
Measure	Caption	Localized Labels[My Button Caption]	My Button Caption					
Measure	Caption	Localized Labels[My Visual Title]	My Visual Title					

Over the next few steps, you will delete these three sample report labels and replace them by adding two of your own.

8. Drop down the **Generate Translated Tables** menu and select click **Add Labels to the Localized Labels Table**.

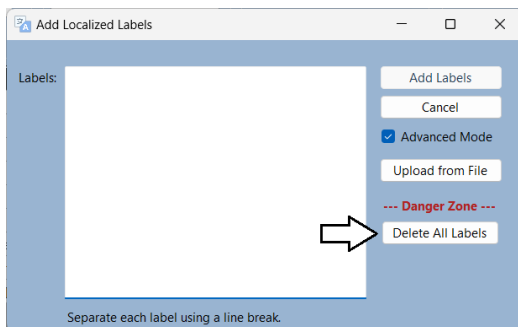

Note you can also execute the **Add Labels to the Localized Labels Table** command using the shortcut key of **Ctrl+A**.

9. In the **Add Localized Labels** dialog, click the **Advanced Mode** checkbox.

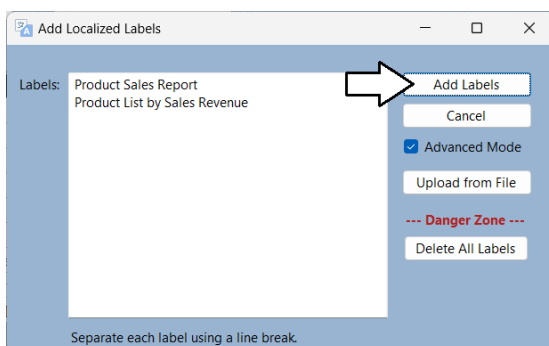

10. Once the dialog is in **Advanced Mode**, click the **Delete All Labels** button to remove the sample report labels.

11. In the **Labels** textbox, type the report label **Product Sales Report**.

12. Enter a line break and then type in the second label **Product List by Sales Revenue**.

13. Click the **Add Labels** button to add the two new labels to your project.

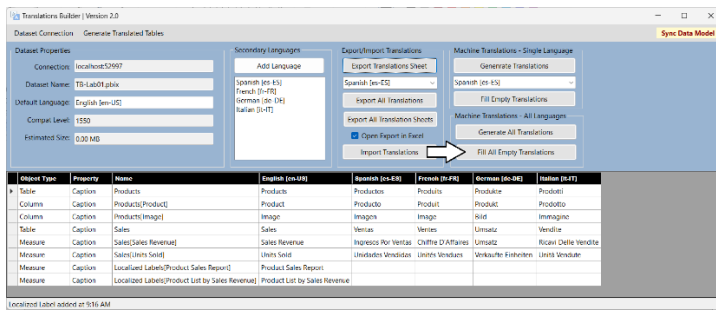

14. You should now see two new rows have been added to the translations grid with the two new report labels.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]	Dutch [nl-NL]	French [fr-FR]	German [de-DE]	Italian [it-IT]
Table	Caption	Products	Products	Productos	Producten	Produits	Produkte	Prodotti
Column	Caption	Products[Product]	Product	Producto	Product	Produit	Produkt	Prodotto
Column	Caption	Products[Image]	Image	Imagen	Beeld	Image	Bild	Immagine
Table	Caption	Sales	Sales	Ventas	Verkoop	Ventes	Umsatz	Vendite
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas	Omzet	Chiffre D'Affaires	Umsatz	Ricavi Delle Vendite
Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas	Verkochte Eenheden	Unités Vendues	Verkaufte Einheiten	Unità Vendute
Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report					
Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue					

15. Click the **Fill All Empty Translations** button to create all the translations for both report labels.

16. At this point, the translations grid should be completely filled with machine-generated translations.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]	French [fr-FR]	German [de-DE]	Italian [it-IT]
Table	Caption	Products	Products	Productos	Produits	Produkte	Prodotti
Column	Caption	Products[Product]	Product	Producto	Produit	Produkt	Prodotto
Column	Caption	Products[Image]	Image	Imagen	Image	Bild	Immagine
Table	Caption	Sales	Sales	Ventas	Ventes	Umsatz	Vendite
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas	Chiffre D'Affaires	Umsatz	Ricavi Delle Vendite
Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas	Unités Vendues	Verkaufte Einheiten	Unità Vendute
Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	Informe De Ventas De Productos	Rapport Sur Les Ventes De Produits	Produktverkaufsbericht	Report Sulle Vendite Dei Prodotti
Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	Lista De Productos Por Ingresos Por Ventas	Liste De Produits Par Chiffre D'Affaires	Produktliste Nach Umsatz	Elenco Dei Prodotti Per Fatturato Delle Vendite

There is one critical step you must complete after modifying report labels in the **Localized Labels** table. More specifically, you must execute **Generate Translated Localized Labels Table** to create the measures that will be used to surface report labels on a report.

17. Drop down the **Generate Translated Tables** menu and select click **Generate Translated Localized Labels Table**.

Note you can also execute the **Generate Translated Localized Labels Table** command using the shortcut key of **Ctrl+L**.

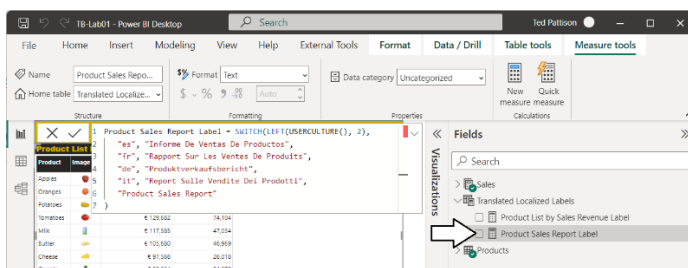

18. Return to Power BI Desktop and navigate to **Report view**.

19. Locate the **Translated Localized Labels** table in the **Fields** list.

The measures in the **Translated Localized Labels** table are what you use to display report labels on a Power BI report.

20. Select the measure named **Product Sales Report Label** and examine the DAX expression behind this measure.

You should not edit the DAX expressions of measures in the **Translated Localized Labels** table. Any changes you make will be lost as all the measures in this table are deleted and recreated each time you execute **Generate Translated Localized Labels Table**.

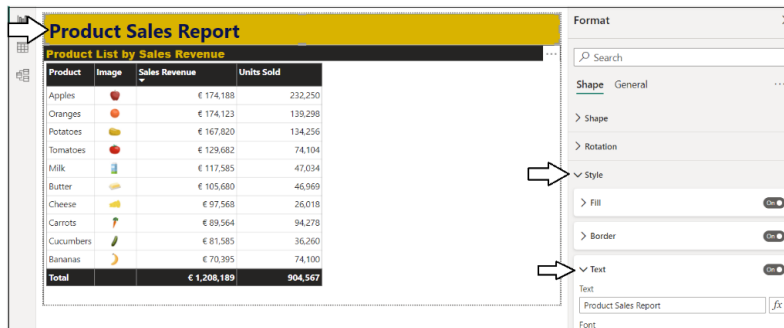

21. Select the measure named **Product List by Sales Revenue Label** and examine its DAX expression.

Now that you have created the measures for translation in the **Translated Localized Labels** table, it's time to use them in the report.

22. In the report layout, select the large yellow rectangle shape that displays the report title **Product Sales Report**.

23. With the rectangle shaped selected, move to the **Format** pane and locate the **Text** section inside the **Style** selection.

24. Expand the **Text** section to see the **Text** property is configured with the literal string value of **Product Sales Report**.

Literal string values in a report layout cannot be localized. Therefore, you will replace this literal string with a measure with translations.

25. Click on the **fx** button to the right of the textbox to replace the literal string value.

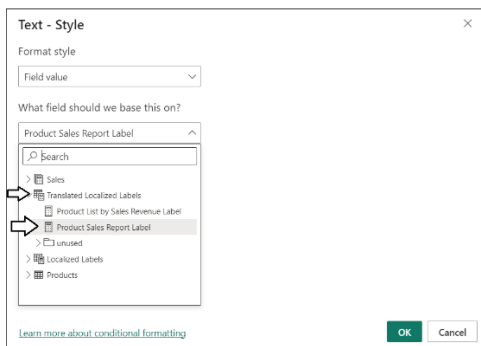

26. In the **Text – Style** dialog, select **Field value** as the **Format style**.

27. Drop down the select control with the caption of **What field should we base this on?**

28. Select the **Product Sales Report Label** measure from the **Translated Localized Labels** table.

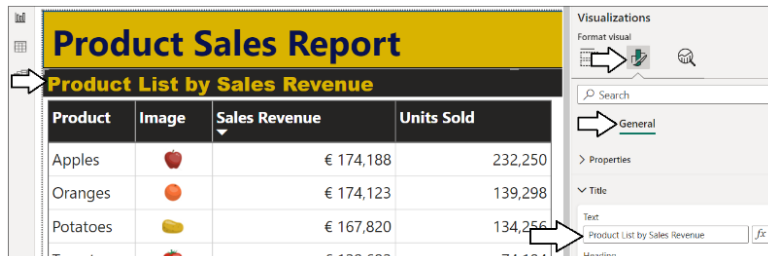

Now that you have configured the report title to support translations, you will do the same for the title of the table visual.

29. Select the table visual that displays the product list.

30. With the table visual selected, move to the **Format** pane and click the **General** tab.

31. Locate the **Title** section and the **Text** property inside with the literal text value of **Product List by Sales Revenue**.

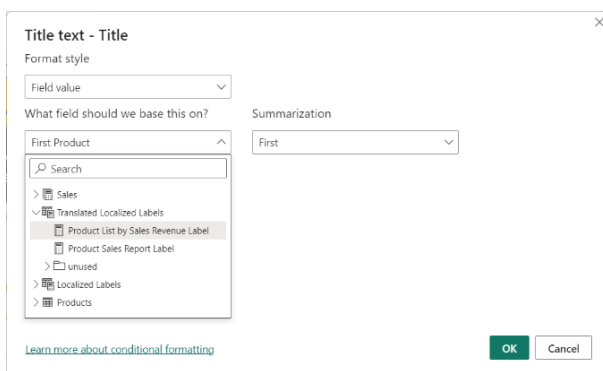

32. Click on the **fx** button to the right of the textbox to replace the literal string value.

33. In the **Text – Style** dialog, select **Field value** as the **Format style**.

34. Drop down the select menu with the caption of **What field should we base this on?**

35. Select the **Product List by Sales Revenue Label** measure from the **Translated Localized Labels** table.

Now, it's time once again to test your work in the Power BI Service,

36. Save your work by clicking the **Save** button.

Don't forget to save your work! Did we mention it's easy to forget and to lose your work.

37. Publish the **TB-Lab01.pbix** project to push your changes to the project's translations to the Power BI Service.

38. When prompted by the **Replace this dataset?** Dialog, click the **Replace** button to continue.

39. Once you see **Success!**, click **Open 'TB-Lab01.pbix' in Power BI** to view the report in the Power BI Service.

40. The report should load as normal showing all text in English at first.

41. Use the bookmark created earlier to load the report in Spanish. Verify the report labels show Spanish translations.

42. Use the bookmark created earlier to load the report in French. Verify the report labels show French translations.

43. Use the bookmark created earlier to load the report in German. Verify the report labels show German translations.

44. Use the bookmark created earlier to load the report in Italian. Verify the report labels show Italian Translations.

You have now implemented report label translations using the Translations Builder localized label strategy. You should be able to see that this will add a significant level of productivity to your future efforts to build Power BI reports that support multiple languages.

## Exercise 4: Creating a Workflow Process To Gather & Integrate Human Translations

Up to this point, you have done the work required to get the report and its underlying dataset into a structure to support translations for secondary languages. You were able to complete this work in a quick and efficient manner using Translations Builder together with machine-generated translations. However, it's important to acknowledge that machine-generated translations alone will not be adequate for many production scenarios. You will need a way to integrate other people acting as translators into a human workflow process.

In this lab exercise, you will use the Translations Builder features to export and import translations using a CSV file format. This will provide a quick way to generate translation sheets that can be sent to human translators. As you will see, translators can make their edits to a translation sheet using Microsoft Excel. Once you've received an updated translation sheet back from a translator, Translations Builder provides an import operation to integrate those updated translations back into the dataset for the current project.

**Prerequisite:** To complete this exercise, you will need Microsoft Excel installed on the same PC running Translations Builder.

1. Launch Windows Explorer and navigate to the folder where you copied the project file **TB-Lab01.pbix**.

2. Create two new folders inside the lab folder named **Outbox** and **Inbox**.

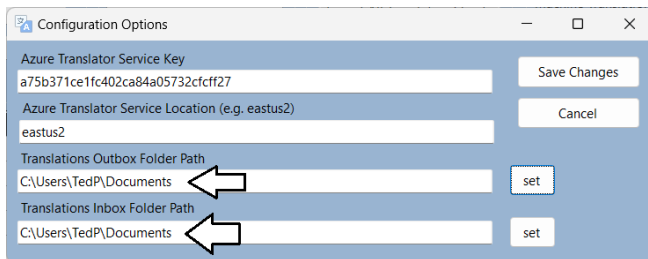

Next, you need to configure settings in Translations Builder so that these folders are used as targets for export and import operations.

3. Return to Translations Builder and drop down the **Dataset Connection** menu.

4. Click **Configure Settings...** to display the **Configuration Options** dialog.

5. By default, folder paths for the **Outbox** and **Inbox** are configured to target the current user's **Documents** folder.

Why does **Outbox** come before **Inbox**? That's because you generally work with the **Outbox** first when you export translation sheets that you will send to translators. Once you get updated translations sheets back from translators, you add them to the **Inbox** for import.

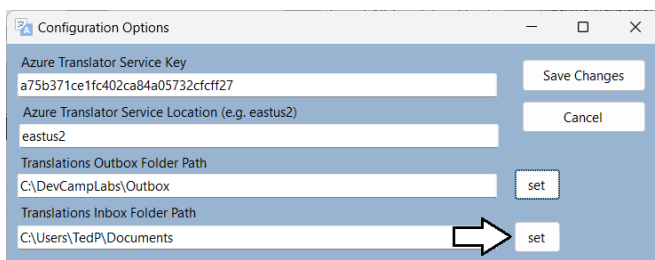

6. Click the **set** button to update the setting for **Translations Outbox Folder Path**.

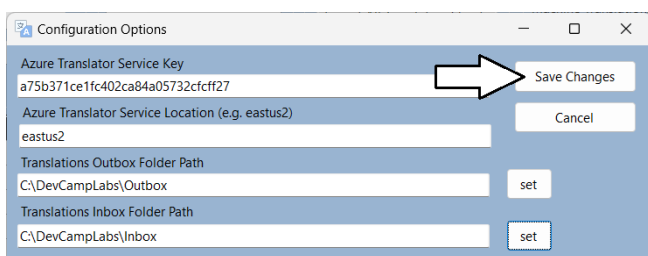

7. Select the **Outbox** folder you created earlier in this exercise.

8. Click the **set** button for **Translations Inbox Folder Path** and select the **Inbox** folder you created earlier

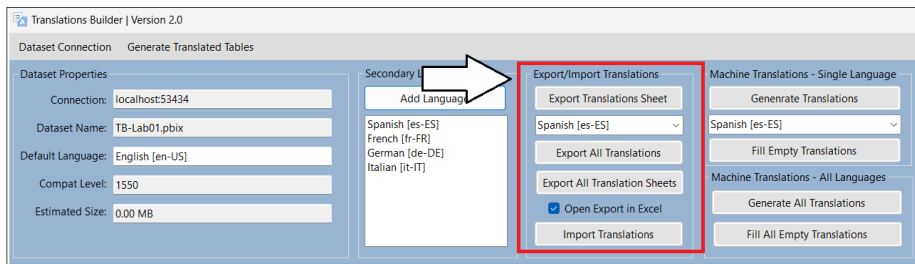

9. Click **Save Changes**.

Now that you have configured the folder paths for the Outbox and Inbox, it's time to begin exporting translation sheets.

## 10. Examine what's inside the Export/Import Translations section.

Let's start by creating a translation sheet for a single language.

11. Drop down the selection menu under the **Export Translations Sheet** button and select **German [de-DE]**.12. After selecting **German [de-DE]**, click the **Export Translations Sheet** button.

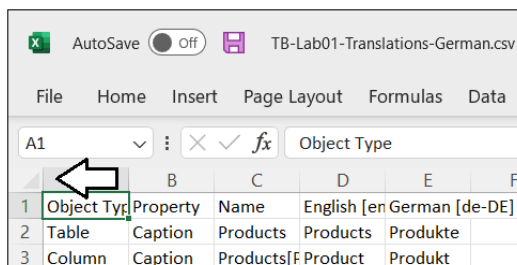

Translations Builder should create a translation sheet named **TB-Lab01-Translations-German.csv** and open this CSV file in Excel

13. Examine the contents of **TB-Lab01-Translations-German.csv**.

	A	B	C	D	E	F	G
1	Object Type	Property	Name	English [en]	German [de-DE]		
2	Table	Caption	Products	Products	Produkte		
3	Column	Caption	Products[F Product	Produkt			
4	Column	Caption	Products[I Image	Bild			
5	Table	Caption	Sales	Sales	Umsatz		
6	Measure	Caption	Sales[Sale: Sales Reve	Umsatz			
7	Measure	Caption	Sales[Unit: Units Sold	Verkaufte Einheiten			
8	Measure	Caption	Localized I Product Sa	Produktverkaufsbericht			
9	Measure	Caption	Localized I Product Li:	Produktliste Nach Umsatz			

Over the next two steps you will use a trick in Excel to widen the columns so ou can see all their contents.

## 14. Click on the top left corner where the row headers and the column headers meet. This should select all columns and rows.

15. Double-click on the column heading divider between the column headers showing **A** and **B**.

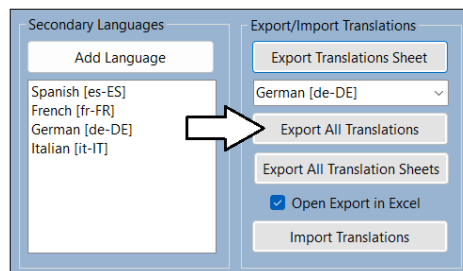

16. You should now be able to see all the text from each column.

	A	B	C	D	E
1	Object Type	Property	Name	English [en-US]	German [de-DE]
2	Table	Caption	Products	Products	Produkte
3	Column	Caption	Products[Product]	Product	Produkt
4	Column	Caption	Products[Image]	Image	Bild
5	Table	Caption	Sales	Sales	Umsatz
6	Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Umsatz
7	Measure	Caption	Sales[Units Sold]	Units Sold	Verkaufte Einheiten
8	Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	Produktverkaufsbericht
9	Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	Produktliste Nach Umsatz

This translation sheet is what you will send to translators. They can then use Excel to review the machine translations and make changes wherever they are required.

17. Close **TB-Lab01-Translations-German.csv** and return to Translations Builder.

18. Click the **Export All Translations** button to export a master translation sheet with the translations for all languages.

Translations Builder creates a translation sheet named **TB-Lab01-Translations-Master.csv** and opens this CSV file in Excel

19. When **TB-Lab01-Translations-Master.csv** open in Microsoft Excel, you cannot see the contents of all columns at first.

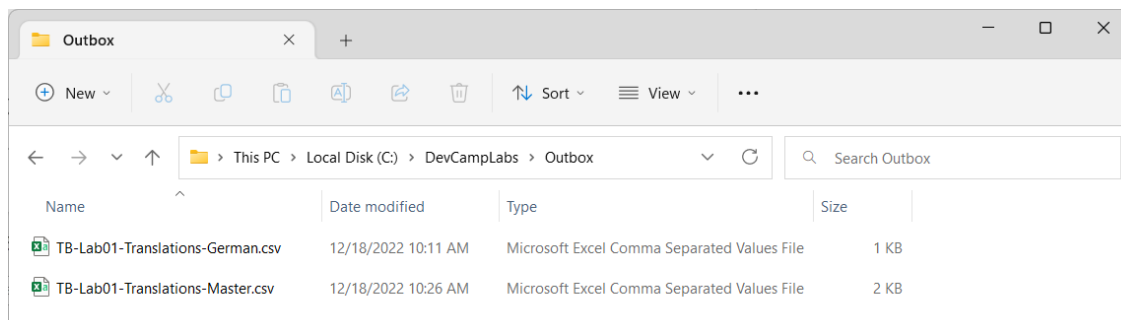

The screenshot shows the TB-Lab01-Translations-Master.csv file open in Microsoft Excel. The first few columns are visible, showing the object types and their translations in English, Spanish, French, German, and Italian.

20. Use the Excel trick you learned earlier to expand all columns so you can see the entire contents of all cells.

	A	B	C	D	E	F	G	H
1	Object Type	Property	Name	English [en-US]	Spanish [es-ES]	French [fr-FR]	German [de-DE]	Italian [it-IT]
2	Table	Caption	Products	Products	Productos	Produits	Produkte	Prodotti
3	Column	Caption	Products[Product]	Product	Producto	Produit	Produkt	Prodotto
4	Column	Caption	Products[Image]	Image	Imagen	Image	Bild	Immagine
5	Table	Caption	Sales	Sales	Ventas	Ventes	Umsatz	Vendite
6	Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas	Chiffre D'Affaires	Umsatz	Ricavi Delle Vendite
7	Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas	Unités Vendues	Verkaufte Einheiten	Unità Vendute
8	Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	Informe De Ventas De Productos	Rapport Sur Les Ventes De Produits	Produktverkaufsbericht	Report Sulle Vendite Dei Prodotti
9	Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	Lista De Productos Por Ingresos Por Ventas	Liste De Produits Par Chiffre D'Affaires	Produktliste Nach Umsatz	Elenco Dei Prodotti Per Fatturato Delle Vendite

Now that you have learned to export translations sheets, it's time to examine how to manage translation sheet files.

21. In Windows Explorer, navigate to the **Outbox** folder. You should see the two files you generated using export operations.

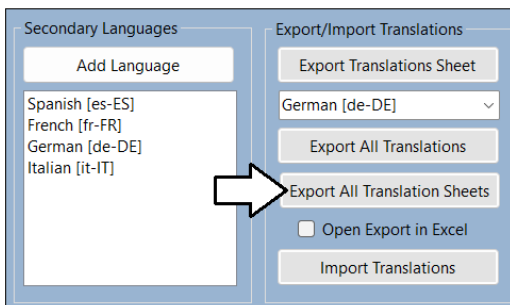

22. Return to Translations Builder and uncheck the checkbox with the caption **Open Export in Excel**.

All three export commands use this checkbox to decide whether to open a translation sheet in Excel after it's generated. In some cases, it's handy to have the translation sheet open in Excel. In other scenarios like the one ahead, it's unnecessary and distracting.

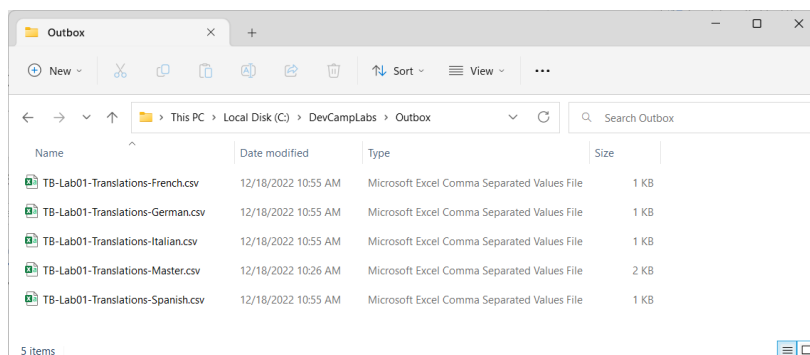

23. Click the **Export All Translation Sheets** button.

The **Export All Translation Sheets** command generates the complete set of translation sheets to be sent to translators.

24. Return to the **Outbox** folder in Windows Explorer.

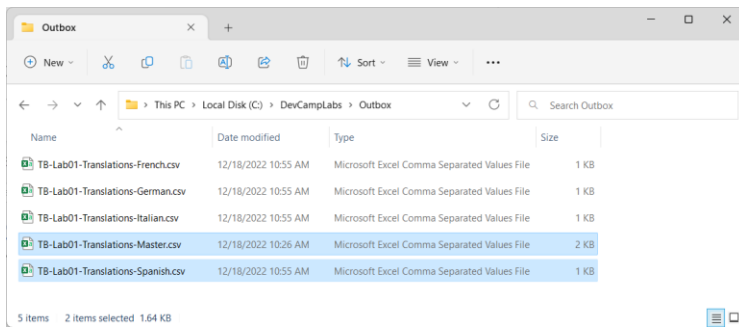

25. You should see that a sperate translation sheet has been generated for each secondary language.

Now that you have experienced how to export translation sheets, you will now learn how to import translation sheets.

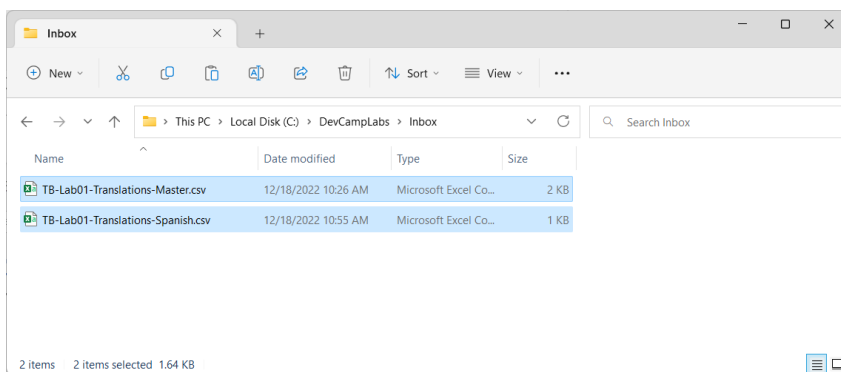

26. In the **Outbox** folder in Windows Explorer, select **TB-Lab01-Translations-Master.csv** and **TB-Lab01-Translations-Spanish.csv**.

27. Copy the two selected translation sheet files to the Windows clipboard.

28. Navigate from the **Outbox** folder to the **Inbox** folder.

29. Paste the two translation sheet files from the Windows clipboard into the **Inbox** folder.

30. Open the translation sheet named **Inbox\TB-Lab01-Translations-Spanish.csv** in Microsoft Excel.

TB-Lab01-Translations-Spanish.csv				
File Home Insert Page Layout Formulas Data Review View Automate Help				
E1 : X ✓ fx Spanish [es-ES]				
	A	B	C	D
1	Object Type	Property	Name	English [en-US]
2	Table	Caption	Products	Products
3	Column	Caption	Products[Product]	Product
4	Column	Caption	Products[Image]	Image
5	Table	Caption	Sales	Sales
6	Measure	Caption	Sales[Sales Revenue]	Sales Revenue
7	Measure	Caption	Sales[Units Sold]	Units Sold
8	Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report
9	Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue
				Spanish [es-ES]
				Productos
				Producto
				Imagen
				Ventas
				Ingresos Por Ventas
				Unidades Vendidas
				Informe De Ventas De Productos
				Lista De Productos Por Ingresos Por Ventas

The job of the translator is to review all translations in the fifth column and to make updates where appropriate. From the perspective of the translator, the top row with column headers and the first four columns should be treated as read-only values.

31. Enter new values for each of the Spanish translations in the fifth column.

	A	B	C	D	E
1	Object Type	Property	Name	English [en-US]	Spanish [es-ES]
2	Table	Caption	Products	Products	This
3	Column	Caption	Products[Product]	Product	Is
4	Column	Caption	Products[Image]	Image	a
5	Table	Caption	Sales	Sales	Test
6	Measure	Caption	Sales[Sales Revenue]	Sales Revenue	to see
7	Measure	Caption	Sales[Units Sold]	Units Sold	how
8	Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	import
9	Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	work

Don't worry whether the values you are valid translations. You just need to add any text so you can test the import process.

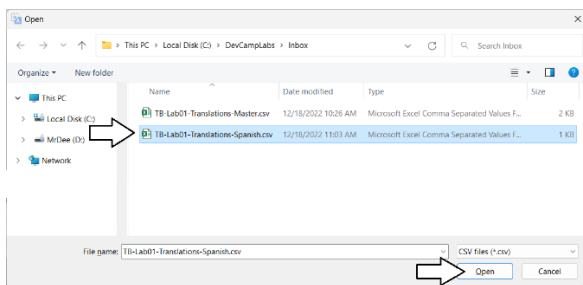

32. Save your changes to **TB-Lab01-Translations-Spanish.csv** and then close the file in Microsoft Excel.

33. Return to Translations Builder and click the **Import Translations** button.

Remember to close translation sheet files in Microsoft Excel before importing them with Translations Builder to prevent errors.

34. In the **Open** file dialog, select **TB-Lab01-Translations-Spanish.csv** and click **Open**.

35. You should see that your updates to the Spanish translation sheet now appear in the translation grid.

				Import Translations	Fill All Empty Translations	
Object Type	Property	Name	En	Spanish [es-ES]	French [fr-FR]	German [de-DE]
Table	Caption	Products	Products	This	Produits	Produkte
Column	Caption	Products[Product]	Product	Is	Produit	Produkt
Column	Caption	Products[Image]	Image	a	Image	Bild
Table	Caption	Sales	Sales	Test	Ventes	Umsatz
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	to see	Chiffre D'Affaires	Umsatz
Measure	Caption	Sales[Units Sold]	Units Sold	how	Unités Vendues	Verkaufte Einheiten
Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	import	Rapport Sur Les Ventes De Produits	Produktverkaufsbericht
Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	work	Liste De Produits Par Chiffre D'Affaires	Produktliste Nach Umsatz

Now that you have seen how to how to import translations from an updated translations sheet with a single language, it's time to move ahead and import translations from all languages at once by importing the master translation sheet.

36. click the **Import Translations** button.

37. In the **Open** file dialog, select **TB-Lab01-Translations-Master.csv** and click **Open**.

38. You should see that the original, machine-generated Spanish translations now appear in the translation grid.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]	French [fr-FR]
Table	Caption	Products	Products	Productos	Produits
Column	Caption	Products[Product]	Product	Producto	Produit
Column	Caption	Products[Image]	Image	Imagen	Image
Table	Caption	Sales	Sales	Ventas	Ventes
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas	Chiffre D'Affaires
Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas	Unités Vendues
Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	Informe De Ventas De Productos	Rapport Sur Les Ventes De Produits
Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	Lista De Productos Por Ingresos Por Ventas	Liste De Produits Par Chiffre D'Affaires

You can see that the master translation sheet can also serve as a great way to backup and restore your translations work. To make this point, you are now going to delete the column for French. Deleting a column like this will delete all translations for that language. As you will see, Translations Builder will automatically add the column back if it finds the column when importing a translation sheet.

39. Right-click on the **French [fr-FR]** column header and click **Delete Secondary Language**.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]	French [fr-FR]	German [de-DE]
Table	Caption	Products	Products	Productos	Produits	Produkt
Column	Caption	Products[Product]	Product	Producto	Produit	Produkt
Column	Caption	Products[Image]	Image	Imagen	Image	Bild
Table	Caption	Sales	Sales	Ventas	Ventes	Umsatz
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas	Chiffre D'Affaires	Umsatz
Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas	Unités Vendues	Verkaufte Einheiten
Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	Informe De Ventas De Productos	Rapport Sur Les Ventes De Produits	Produktverkaufsbericht
Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	Lista De Productos Por Ingresos Por Ventas	Liste De Produits Par Chiffre D'Affaires	Produktliste Nach Umsatz

40. When prompted by the **Confirm Delete Secondary Language Operation** dialog, click **OK** to continue.

Confirm Delete Secondary Language Operation

Are you sure you want to delete the language - French [fr-FR]?  
Deleting this secondary language will delete all its translations.

OK Cancel

41. You should see that the column for French has been removed from the translations grid.

Object Type	Property	Name	English [en-US]	Spanish [es-ES]	German [de-DE]	Italian [it-IT]
Table	Caption	Products	Products	Productos	Produkte	Prodotti
Column	Caption	Products[Product]	Product	Producto	Produkt	Prodotto
Column	Caption	Products[Image]	Image	Imagen	Bild	Immagine
Table	Caption	Sales	Sales	Ventas	Umsatz	Vendite
Measure	Caption	Sales[Sales Revenue]	Sales Revenue	Ingresos Por Ventas	Umsatz	Ricavi Delle Vendite
Measure	Caption	Sales[Units Sold]	Units Sold	Unidades Vendidas	Verkaufte Einheiten	Unità Vendute
Measure	Caption	Localized Labels[Product Sales Report]	Product Sales Report	Informe De Ventas De Productos	Produktverkaufsbericht	Report Sulle Vendite Dei Prodotti
Measure	Caption	Localized Labels[Product List by Sales Revenue]	Product List by Sales Revenue	Lista De Productos Por Ingresos Por Ventas	Produktliste Nach Umsatz	Elenco Dei Prodotti Per Fatturato Delle Vendite

42. click the **Import Translations** button.

43. In the **Open** file dialog, select **TB-Lab01-Translations-Master.csv** and click **Open**.

44. After the import operation competes, the **French [fr-FR]** column should reappear as the last column on the right.
